Keywords : Palatika, Correspondence

Page : vi + 50 pages

Gunadarma University

PALATIKA is the Student Activity Unit in Jakarta Campus STMIK STI & K,
which moves in the field of Nature Lovers. During this recording
correspondence on SMEs Palatika for making the report is still done manually
that is by way of note on the paper and then on the move through Microsoft
Word as the final ahead of the accountability report so many letters that are not
listed.

Palatika should use a database that has a very important role in the processing of
data such as data and correspondence. Through Correspondence Database
handling this by using PHP (Personal Home Page) and MySQL is a good
solution in solving the problems facing Palatika secretary during the time is to
launch a secretarial job in preparing reports and correspondence and the receipt
of correspondence.
