By still many companies - companies that use an application using Dos under a less good result in the display - the display program and too complicated for the user program to mengentry data in the transaction. Moving on from that, the writer tries to make a payment transaction application programs that are expected to simplify and accelerate the total processing of payment transactions and enables the user application programs to provide information on the results of payment transactions to his superiors. Program applications created using Microsoft Visual Basic 6.0, the conclusion obtained is that by using this application program to accelerate the total processing of payment transactions and facilitate the user's application programs to provide information on the results of payment transactions to his superiors, as well as in terms of appearance of the application program looks a bit more interesting.
