The use of computers is now almost penetrated all sectors of human life.

Computerization (application of computer technology) not only affect someone personally, but also affect people and organizations that exist, do not miss to not be touched by computerization. The speed and accuracy of the computer is very useful in data processing in various applications in different areas, namely to provide information quickly, precisely and accurately. Registration system is not computerized at the clinic can often cause such delays that produced the information, especially reports on the need. This causes the need to use the computer as a tool in data processing and report on a clinic.
