Along with the development of Information and Communication Technology
(ICT), which grew rapidly and needs someone to obtain information more
quickly expected. Where information has become an important requirement for
the whole community. Computer as one tool producer of information, makes the
existence of these tools becomes important. Computer use can be seen from
within government, organizations, companies, education to housing. To support
the computer as a learning tool producer of information required for computer
science itself. As more and fariatif types of instructional computer science
course can enhance the development of information and communications
technology that already exists. Thus improving the quality and quantity of
human resources in the field of computer science to be better too.   With
this application-based Digital Library website is a person who needs information
in computer science can get it quickly without limitation of time and place. With
this simplicity is expected to increase the quantity and quality of a person in the
development of information technology.
