Along with the rapid development in information technology make every person getting information easier. Internet is a fast and easy way to convey that information reach the wider community. The use of website is very useful for promoting, offering and informing the sales of cars for the Autocar Showrooms consumers. The information is presented in a web page display that is easily understood by consumers, start from the main menu to the specific searching of cars based on brand, type and price of the car. Macromedia Dreamweaver 8.0, PHP and MySQL are a few examples of the many software tools that can solve the problem.
