Keywords: Digital capacitance meter

### **Abstract:**

This thesis explores the design, build, analyze the work circuit, and test a series of Digital Capacitance Meter. It works by using two monostable multivibrator as shown on the input from the output through seven segment indicator. As the source voltage used 9-volt battery.

This tool is used to determine condition and capacity of a capacitor in the various units, namely: Pikko farad (pF), nano-farad (nF), micro and milli farad farad (MF).
