Abstract

In a company, the process of income and expense of money must have a profit-generating goal base. The success of financial management within the company, can be monitored from the ability of the financial management in managing the finances and utilize all the opportunities that exist with as much as possible with the aim to control the company's cash (cash flow) and the impact of generating profits in accordance with expectations. With a web-based online accounting system version 2.0, companies can be given the ease to manage money in and out of the company's cash. It has a user friendly system with navigation that makes it easy for the financial management to use it. Starting from the creation of a company's cash account used as a cash account and corporate bank account on the system, deletion or filing of cash accounts, up to the transfer invoice creation feature, receive and send money. Thus, this system is very effective and efficient in the management of income and corporate cash disbursements.

Keywords: Accounting Online System, Financial Management, Cash and Bank

1. Introduction

Advances in information technology continue to spread in all sectors, especially in the economic field [1]. Currently, the accounting system is very rapid development [2]. The purpose of developing information systems is to add value to the company [3]. Accounting system in an economic field becomes an important factor in success, just as in a company can not be separated from the accounting process [4], [13]. The company must obtain income from the object produced, expenditures for any routine expenses that must be paid monthly or yearly [5]. And to manage the income and expenditure of corporate cash, currently required an accounting system that provides financial statements in real-time and in accordance with the needs of the company. The importance of financial management is, the company can control the capital expenditure where the issued capital must be balanced with the nominal revenue generated [7-8]. If the management applied in the company is effective, then the company will certainly know the right strategy to keep the balance of income with expenditure [6-9].

The application of web 2.0 based online accounting system is a real form of technological success in the economic field [10], [14]. A system that is flexible, makes it easy for each company to adapt to existing needs [11]. This online accounting system, makes it easy to record income and cash disbursements of the company in detail [12], [15].

2. Result and Discussion

By recording all outgoing cash and entry in a company well, it will facilitate the financial management to conduct monitoring in every turnover of the company's cash flow. However, if a company is not good, the company can use this web 2.0 based online accounting system, to perform cash management in and out.

Figure 1. Display Menu Cash & Bank

Figure 1, is the first view of menu cash and bank. There are viewboard, featuring the income and expense of the company for 30 (thirty) days later, and also displays the nominal part cash and credit card balances.

To create a new corporate account, users sign in to the cash & bank menu and select + create a new account.
