ABSTRACT

The aim of this research is to examine the effect of parent's supports toward the champion motivation possessed by athletes in Samarinda city. This research method used in this research is descriptive qualitative method. The instrument of research is the questionnaires shared to 50 parent's Silat athletes in Samarinda. The population of this research is all parent's athletes and Silat athletes in Samarinda. The saturated sample research technique is used to the all over population as the sample and it presented in the percentage term. This research is expected to be done in 6-month periods. The result of this research is that the support parent's athletes gained a positive trend with 93.4% and the champion motivation of athlete also had the same pattern with 97.2%.

Keywords: parent's, the champion motivation, athlete, pencak silat, samarinda

1. INTRODUCTION

Pencak Silat as a heritage of the Indonesian people is a senior martial art that is in accordance with the personality of the Indonesian nation. Unrelated martial arts, art and spiritual sports are incorporated into a unit that is united and cannot be approved. The training is athletic, as it is in sport and professional dance, yet the competence that the martial arts teach stands apart from those of sport or dance by means of its external, instrumental value as a weapon. It is precisely this external, instrumental effectiveness, the weapons potential of martial arts, that accounts for the striking beauty of its movements. (Bowman, P & Judkins, B.N., 2016).

At the moment Pencak Silat is very popular with the wider community and also the Pencak Silat sports for the first time entering the sports contested at the 2018 Asian Games in Jakarta and Palembang. According to Nugroho (2007) said that on September 22-23 1979 a conference was held at the International Pencak Silat Federation which was attended by several neighboring countries, including: Singapore, Malaysia, Brunei Darussalam, and

Indonesia as the host. On the level technique, competitions prompted a radical alteration of traditional styles and training styles and training practices. The point system used in competitions gives scores of one point for a clean punch, two for a kick, and three for a 'drop'. (Wilson, A.D, 2002).

The main factor that can spur the development and achievement of martial arts athletes is the increase in quality in coaching, training and improvement of facilities and infrastructure. There is a lot of knowledge that is closely related to pencak silat, among others: anthropometry, sports psychology, anatomy, biomechanics, sports physiology and training programs provided by the trainer. In order to be able to do the technique properly and properly, good biomotor capabilities are needed. The biomotor ability needed in pencak silat is power, coordination, and accuracy in the target field. (Nugroho, 2005).

In 2018, the Province of East Kalimantan held a Provincial VI Sports Week in East Kutai. There are many sports that are competed in East Kutai Provincial Sports Week, one of which is the martial arts. At present pencak silat in East Kalimantan Province can be said to have developed, because there are several athletes from the Province of East Kalimantan who have penetrated the National and even International champions.

Pencak silat in Samarinda City is currently conducting training camps at the Martial Arts Hall in Air Hitam Polder. The contingent of Pencak Silat Kota Samarinda targeted by KONI Samarinda could retain the title of General Champion I, the same as the results of the previous 2013 Provincial Sports Week V. Therefore the support of the athlete's parents is very important to increase the achievement motivation of Pencak Silat athletes in Samarinda City. Such support can be in the form of encouragement to always be passionate about training, support during training and during competition and also the prayers of both athletes' parent's.

This General Champion Target I is what increases the motivation of pencak silat athletes in Samarinda City during training. In the end the Samarinda City contingent VI, the Pencak Silat sporting event, managed to become the first winner with 11 gold medals.

2. METHOD

This research is a quantitative descriptive study that aims to determine parental support for the achievement motivation of Samarinda City martial arts athletes in the Sports Week of East Kalimantan Province. According to Arikunto, S (2010) that descriptive research is research that intends to describe or describe something, such as circumstances, conditions, situations, events, activities, and others. The method used is a survey, the data collection

technique uses a questionnaire, the scores obtained are analyzed using quantitative descriptive analysis as outlined in the form of a percentage.

This research was conducted in the Pencak Silat Hall in Samarinda's Black Water Polder. Data collection was carried out on November 2, 2018 - November 18 2018. The subjects of this study were parents of athletes and martial arts athletes in Kota Samarinda with a total of 50 respondents.

Population is a generalization area consisting of: objects / subjects that have certain qualities and characteristics set by the researcher to be studied and then conclusions drawn, (Sugiyono, 2013). The population in this study were all parents of athletes and athletes in Samarinda martial arts in the Sports Week of East Kalimantan Province in 2018. In this study using a saturated sampling technique that is sampling technique if all members of the population are used as a sample (Sugiyono, 2013), or in other words this study is a population research with samples of all parents of athletes and athletes from Samarinda in the East Kalimantan Sports Week Year 2018 with 25 people.

This research was conducted to collect data used as a basis for determining the feasibility of research. Techniques and instruments for data collection must be determined precisely so that accurate data is obtained in accordance with the problems and objectives of the study.

The instrument used to collect data in this study is a questionnaire. The instrument is used as a data collection tool from experts, trainers and athletes in connection with criticism, suggestions and improvements that are useful for the research. Before the experts and subjects filled out the questionnaire for data collection, it was explained in advance some ways to fill out the questionnaire. To give a score of each statement answered by the respondent by checking yes or no. In the process of parental support for the achievement motivation of pencak silat athletes in Samarinda City.

3.FINDINGS AND DISCUSSION

3.1. Data analysis

The data analysis technique in this study used descriptive statistical techniques as outlined in the form of percentages:

$$P = \frac{f}{N} \times 100\%$$

Information:

P = percentage of yield
f = frequency of subjects
n = total number

Table 1. Norms for Assessment Criteria

Value	Category
81-100%	Very Good
61-80%	Well
41-60%	Pretty Good
21-40%	Less
0-20%	Very Less

(Akbar, 2013)

Data from research on parental support for achievement motivation Samarinda City Pencak Silat athletes in the Provincial VI Sports Week of East Kalimantan are presented in the form of a parent support questionnaire, for more details can be seen in the following table:

Table 2. Parental support

No	Aspects Assessed	Choice of Answers	
		Yes	No
1	Do parents support your profession as a martial arts athlete?	50	0
2	Do parents accompany you when you compete?	45	5
3	Do parents ask about the progress of your training?	46	4
4	Are parents concerned with the development of your achievements?	44	6
5	Do parents pay special attention when you compete	44	6
6	During training / competition, do parents pray for you?	47	3
7	Do your parents always encourage you to continue to practice?	49	1
8	Do your parents provide your support when at home?	47	3
9	Do your parents provide free time to practice?	46	4
10	Do parents prepare additional equipment and purchase vitamin supplements for you?	50	0
Total score		468	32
Maximum Number of Scores		500	500
Percentage of Assessment		93,4%	6,6%
Category		Very Good	Very Less

Figure 1. Support of Athletes' Parents

Based on the table and diagram above, it can be explained as follows:

1. Assessment of parental support for achievement motivation of Pencak Silat athletes in Kota Samarinda which answers yes to the display aspect shows that in the category it is very good, with a percentage of 93.40%.
2. An assessment of parents' support for achievement motivation in Pencak Silat athletes in Kota Samarinda, which answered no aspirations, showed that it was in a very good category, with a percentage of 6.60%.

Based on the results of filling in the questionnaire, the relationship between parents' support for achievement motivation in Samarinda City pencak silat athletes was very good with a category of 93.40%.

Table 3. Achievement Motivation

No	Aspects Assessed	Choice of Answers	
		Yes	No
1	Do you always pray before practice and compete?	49	1
2	Do you learn the techniques and tactics given by the trainer?	50	0
3	Do you pay attention to the coach in giving direction?	50	0
