Keywords: national values, Youth, future, confidence, national pride, patriotism, spiritual and moral, physical perfection, upbringing, education,

Introduction

Today, it is important to inculcate our national values in the minds of the younger generation and thus instill in our young people a sense of confidence in the future. The soil of our country is, without a doubt, the cradle of immortal values. Patriotism is one of the most important aspects of national values. Declaring patriotism does not mean self-sacrifice. Today, every member of society can feel the homeland with all his heart and become a participant in the ongoing reforms in our country, and the chances to achieve the desired goals will increase. Results and discussion

In this regard, President Shavkat Mirziyoyev said, "The ideology of the new Uzbekistan we are creating will be the idea of goodness, humanity and humanism. When we say ideology, we mean, first of all, the education of thought, the education of national and universal values. They are based on the thousands of years of life concepts and values of our people." [3]

A person develops according to the rules of life in the society in which he lives. In today's globalization process, it is becoming important to inculcate in the minds of not only our people, but also the younger generation, the preservation of national pride, national pride, honor and dignity of the country is the highest value for each of us. It is no secret that the values of Islam in our country are deeply ingrained in the consciousness of our people. M. According to Bekmurodov, "... the combination of religious beliefs with labor. The movement to know the mysteries of the world through science is connected with the realization of the greatness and power of Allah "[10.] writes. We can see the predominance of feelings such as faith, belief, conscience and, of course, patriotism in a person who values work.

Spiritually, the concept of value is "a concept that is an integral part of the spirituality of man and society, used to express the value of events, happenings, processes, situations, qualities, demands and procedures in the world" [8].

In the encyclopedic dictionary of philosophy, "Value is a philosophical-sociological and axiological concept used to show the universal, socio-moral, cultural and spiritual significance of certain events in reality. Everything, events and happenings that are important for society, man and humanity: freedom, goodness, equality, peace, truth, enlightenment, culture, material and spiritual wealth, monuments, beauty, moral character and virtues, traditions, customs, customs and others "[9]. President Shavkat

Mirziyoyev said, "It is well known that the upbringing of the younger generation has always been important and relevant. But in the 21st century we live in, this issue is really becoming a matter of life and death "[1], pointing out that the educational process in our country is a leading value.

On August 14, 2018, the Presidential Decree No. PP-3907 "On measures to bring up young people spiritually, morally and physically harmoniously, to raise their education system to a qualitatively new level" [2], ideological immunity, respect for national and universal values, measures to address shortcomings such as delays in non-educational activities.

In general, over the past two years, dozens of resolutions of the President on radical changes in the education system, many orders of ministries and higher authorities are being submitted for implementation. The goal is one. In other words, if we allow delays in inculcating national and universal values in the minds of today's younger generation, forming a spirit of devotion to the motherland and the country, and improving the spiritual and cultural world, it will be even more difficult to achieve our noble goals. The President said, "Education and enlightenment are the main factors of human well-being, encourage people to be kind, to be generous and patient." [4] he pointed out. In his speech at the IV Congress of the Kamolot Youth Social Movement, President Shavkat Mirziyoyev said: "It is known that the upbringing of the younger generation has always been important and relevant. But in the 21st century we live in, this issue is really becoming a matter of life and death. "[7] This is not in vain, of course. After all, how difficult it is to decide on a healthy environment in society. Today, many scientists consider the 21st century in which we live - a century dominated by intellectual wealth, a period of rapid growth of industries based on modern and advanced technologies»[5]

When we study patterns of economic growth, such as the Japanese miracle, the Korean nature, we first see that they place a strong emphasis on the radical development of the nation's thinking. The gradual introduction of strategic solutions to the problems identified in our country has begun. [6] The main thing is that the need to change the national thinking in the minds of the population, as well as to instill in the minds of the younger generation the ability to respect national culture and values, will continue to grow over time. Indeed, it is possible to carry out the great tasks outlined above by a well-rounded and sane people.

Conclusion

In conclusion, educating the younger generation at the level of world standards and educating them in the national spirit has always been one of the most pressing issues of society in order to strengthen the social, economic, political, legal, cultural and spiritual foundations and values of the current period, further development and prospects and independence. Social development will not be ensured if these tasks are not fulfilled in their proper place. Because only those who are dedicated to their profession and country, have high knowledge and skills, have a strong life position, are active and business-minded, who will devote all their knowledge, abilities and talents in the interests of society, will ensure that Uzbekistan joins the ranks of advanced countries.
