Abstract

The greatest foundation for the emergence of the Third Renaissance, the formation of a new Uzbekistan and the emergence of new unique ideas, the training of a new generation to look into a completely different world, the conditions created for young scientists to realize their inner talents, intelligence and reforms in science and education.

Keywords: foundation, globalization, education, mentality, social networks, Renaissance, Uzbekistan,

INTRODUCTION

Our ancestors, born during the first and second awakenings, amazed the world with their talent, divine intelligence and knowledge, were born and lived on this sacred land. In the fields of science, culture, literature and the universe, they have created world-class innovations and left a cultural and national heritage. The merits of our great ancestors in creating the foundation of the first and second Renaissance in Uzbekistan are invaluable. The first Renaissance was the Samanid period, during which our ancestors created world-class scientific and philosophical works and discoveries. The foundation of Islamic civilization was laid. Social relations are developing in the social sphere. Urban planning is based on the principles of economic and cultural growth, the centralization of science and education, as well as on the specific principles of statehood.

The second renaissance occurred during the reign of Amir Temur and the Temurids, and Mavorounnahr and all of Central Asia raised their development to a new level. During this period, statehood, architecture, international trade, and diplomatic relations flourished. The development of science, culture, and art has been reflected in the growth of popular thinking. Because our unique and unique scientific and spiritual heritage is a source of strength, inspiration, and priceless treasure to create the third Renaissance. In fact, in shaping our ancestors as great men, their ability to travel the world, to study the customs, traditions, values, lifestyle, interests, nature of each nation, their religious and secular knowledge was the basis for creating great inventions.

Listening to all the speeches of our President Shavkat Mirziyoyev at the 72nd session of the UN General Assembly from the rostrum, we are convinced that our President is the creator of new historical milestones not only for Uzbekistan, but also for all mankind. From the very first days, our people felt that serving Uzbekistan on the way to becoming one of the most developed countries is the highest goal set by our President. The work carried out over the past 3-4 years has shown positive changes in the transition of independence from the period of national revival to the period of national recovery and the correctness of the reforms carried out in all areas in the formation of the mechanism for its

implementation. For the first time in the history of Uzbekistan, the idea of "creating a third renaissance" was put forward by the President.

The action strategy for the development of Uzbekistan, adopted by the President, played an important role in realizing this period of growth. The idea of cooperation is the basis for the implementation of the action strategy. Indeed, our President is creating a cradle of great people born in the third renaissance, and so we are working together to achieve this goal, bringing all sectors together. Thanks to these efforts, for the first time in 30 years, the Central Asian states have developed a cooperation plan. At the highest level of cooperation, our President sets an example to the world. Through the fair politics of Sh.Mirziyoyev Uzbekistan's opinion influences global processes in the world.

The President also opened the door to the most important factor of the Third Awakening - to open the door for our people, especially young people, to establish free relations with all nations and peoples, to exchange ideas in the fields of science, literature, art and international social life.

The attention paid to young people, the conditions created for them, their material and spiritual support, the work done by the state and society to realize their potential and achieve results are among the important factors of the third period of awakening in the formation of a new generation with high thinking. In this regard, a great gift was the work on the development and adoption of the State Youth Policy, the UN International Convention on the Rights of Youth in Uzbekistan, as well as the adoption and ratification of the Convention at the Second Youth Forum in Samarkand. Because before that, there were no legal documents, no legal agreements that allow young people to study freely and legally, to fight for their goals.

The forum was attended by young people from all over the world. To the question, 96% of young people answered "Definitely necessary". This convention is a guarantee of human rights, an important document for the participation of the younger generation in international political processes, and an expression of Uzbekistan's views on global problems. Important spiritual keys that influence the development of the thinking of the human factor that underlies the Renaissance:

- ✓ Peace;
- ✓ Education;
- ✓ Human Rights;
- ✓ Tolerance;
- ✓ Mutual Respect Develop Society;
- ✓ Make Everyone Happy and Create Great People.

In all his speeches, the President said that the education and social development of young people is a key factor in laying the foundation for the third renaissance. Another factor underlying the third renaissance of Uzbekistan is the ongoing reforms in the field of education and science, the adopted decrees, the attention paid to teachers and scientists, who play a key role in shaping the future of our young generation. This, in turn, strengthens their responsible attitude to their profession and enhances their professional, intellectual and innovative skills. This is evidenced by the innovative organization of state and non-state preschool educational institutions, the creation of ultra-modern educational institutions equipped with modern computer and IT technologies, as well as presidential schools,

educational grants. In particular, the creation of more than 45 universities in the country in recent years, the increase in grants for admission to universities for young people, benefits for young people when entering universities, the allocation of financial grants by the Government of Uzbekistan to further encourage young people.

The state program "Five Important Initiatives" is aimed at realizing the potential of young people by the President, who played a significant role in creating the third Renaissance. The first direction of the initiative is "Our talented young people in the fields of music, art, painting and crafts are proud of their achievements" and strive and strive for the highest peaks in the future. Their self-confidence is growing, and many young people are encouraged to achieve this goal by sports facilities and modern conditions created in the New Uzbekistan. In particular, the 4th direction of the "Reading" initiative plays an extremely important role in the emergence of the Third Renaissance. In implementing this direction, the President has created such conditions for young people with such attention that they have implemented innovative world-class reforms in the field of reading, which have not been seen in any other country. In particular, in the competitions among young people on the topic "Reading", our talented young people, who really won, were awarded valuable prizes and even cars. This means that the state program "Five Important Initiatives" is also one of the most solid foundations for the emergence of the third renaissance.

The light illuminating the path of the third renaissance is the main goal of our people - to serve and fight for the development of the Motherland, which burned our youth. If there is no goal, there is no growth, no development. We believe that in the new Uzbekistan there is really a new generation of new thinkers who will carry out new reforms, who will carry out new reforms, will become great people of the third Renaissance.

The decrees and resolutions adopted by the President of the Republic of Uzbekistan on the implementation of reforms in the field of science are a factor that accelerates the period of awakening and creates large numbers. Because great people have always reached this level through teachers. It is our scientists who instill in young people the history of our great ancestors of the first and second Renaissance. Because our scientists play a key role in extracting the essence of our rich history, spiritual and scientific heritage, its essence and its realization. As science develops, the economic, socio-cultural sphere develops. Focusing on science serves to develop and expand human thinking, thereby creating a great person. Speaking about science, the President noted that secular knowledge and religious sciences based on holy Islam are also a key factor in the development of human thinking. Al-Moturudi and Al-Bukhari say that Islam is a source of enlightenment, purity of heart and justice. Our ancestors founded the world of hadith in Islamic science all over the world with their religious knowledge. An example of this is the Hadith School in the Al-Bukhari complex, created for young people, and the Islamic Academy in Tashkent. The Third Renaissance, the main factors of the Renaissance:

- The high goal of creating a Third Renaissance in Uzbekistan, the work carried out to achieve this goal has reached a political level;
- Laws and decrees issued in the field of education, science, and reform to create the third renaissance;

- Attention to the human factor is a prerequisite for the development of human thinking, creating conditions for young people to live freely and happily in peace and stability, and to develop their potential;
- Maintaining interstate peace and further development of good-neighborly relations;
- The Convention on the Rights of the Child, adopted for the free participation of young people in international political processes, solving global problems on the basis of the law, and creating conditions for the education of our talented young people abroad.
- Development of religious sciences based on holy Islam with secular knowledge;
- Creating new innovative methods for studying the history of our national and spiritual, cultural heritage, inherited from our great ancestors who were born on this earth and made world-class discoveries in science.

CONCLUSION

It is concluded that one of the proofs of the beginning of the Awakening in the New Uzbekistan is the fact that such a great personality as Shavkat Miromonovich led the people of Uzbekistan and laid the foundation for the creation of the third Renaissance. All the above conditions are reformed in our country by our government and head of state for the appearance of the third rebirth and the appearance of the great signs, but the great sign created during the third awakening is born first in the family. So, first of all, we must understand that we are the first factor in the awakening of parents, serving the emergence of the third rebirth and laying the most fundamental for the creation of the great blood of our ancestors, and thus we selflessly study and act for the nation. We and the new generations, talented young people born on this earth, will create a new Uzbekistan and lay the foundation for the third renaissance.
