Article History:	Abstract
<p>Received on: 17-03-2020 Accepted on: 11-05-2020 Published on : 15-05-2020</p>	<p>A review on medicinal plants possessing anti-diabetic activity. Brief description of parts used, extraction and mechanism of induction of diabetes is presented. Diabetes is a metabolic disorder characterised by disturbances in carbohydrate, protein and fat metabolism. Diabetes may be controlled by diet management, insulin injection and by oral hypoglycaemic agents. Herbal medicine have more significance due to their safety, efficacy, and easy availability. Medicinal plants are popularly known for their health benefits. By suggestion of ethnobotanical information about 800 plants shows antidiabetic potential. The most common active constituents to treat diabetes is Flavonoids, tannins, phenolic acids, alkaloids. Various extractions like aqueous, methanolic, ethanolic, dichloromethane, petroleum ether, and hexane were used to demonstrate effective hypoglycaemic activity. Various models like streptozotocin (STZ)-induced diabetes, Alloxan-induced diabetes, alloxan-monohydrate induced diabetes, streptozotocin+ nicotinamide induced diabetes mellitus in rats are used to induce diabetes.</p> <p><i>Key words:</i> Botanical name, extraction, anti-diabetic, mechanism.</p>

Introduction

Diabetes mellitus is a group of metabolic disorders that are characterized by hyperglycemia due to insulin secretion defects, insulin action, or both. Chronic diabetes hyperglycemia is associated with long-term injury, dysfunction, and loss of numerous organs, including the eyes, nerves, heart and blood vessels [1].

In the development of diabetes, many pathogenic mechanisms are involved. These range from autoimmune disruption of the pancreas cells resulting in insulin deficiency, to anomalies resulting in insulin resistance. Deficient insulin action on target tissues is the cause of the defects in carbohydrate, fat, and protein metabolism in diabetes.

Insufficient insulin action results from insufficient secretion of insulin and/or reduced tissue insulin responses at one

or more points in the complex pathways. Insulin secretion deficiency and insulin defects frequently coexist in the same patient, and it is often unknown which abnormality is the primary cause of hyperglycemia [2].

The WHO Global Burden of Disease estimated that about 177 million people in the world had diabetes in the year 2000 in terms of the worldwide burden. This second version of the Diabetes Atlas is estimated at 194 million in 2003, with nearly two-thirds of these people living in developing countries. No comfort at all is given by the forecasts for the future. The above figure can well more than double the year 2025 if current trends prevail [3].

We also recognize that in some communities, as much as a fifth or even a third of acute health sector funding needs to be allocated to diabetes and its long-term complications. In

the world, there are almost 2000 ethnic groups, and almost every group has its own traditional medical knowledge and experience [4].

Anti-diabetic activity of various plants:

Sl. No	Botanical name	Local name	Family	Parts used	Extracts	Mechanism	Reference
1	<i>Camellia sinensis</i>	green tea	Theaceae	Leaves	75%Methanolic extract	Alloxan-induced diabetes	Sabu et al.,2002 ⁵ .
2	<i>Syzygium cumini</i>	Java plum	Myrtaceae	seed	Ethanol extract	streptozotocin (STZ)-induced diabetes	Kumaret al.,2013 ⁶ .
3	<i>Azadirachta Indica</i>	Neem	Meliaceae	Leaves	Aqueous extract	Streptozotocin induced models of IDDM, NIDDM model	Sonia et al.,1999 ⁷ .
4	<i>Tridax procumbens</i>	coatbutton s	Compositae	Leaves	aqueous, alcoholic, and petroleum ether extracts	Alloxan-induced diabetes	Bhagwan et al.,2008 ⁸
5	<i>Terminalia Catappa Linn</i>	Almond	Combretaceae	Leaves	Aqueous cold extract	alloxan-induced diabetic rats	Ahmed et al.,2005 ⁹ .
6	<i>Bauhinia forficata</i>	kachnar	Fabaceae	Leaves	ethanol extract	streptozotocin-diabetes (STZ-diabetes)	Pepato et al.,2002 ¹⁰ .
7	<i>Hibiscus rosasinensis</i>	China rose	Malvaceae	flowers	ethanol extract	Alloxan-induced diabetic	Venkatesh et al.,2008 ¹¹ .
8	<i>Murraya koenigii</i>	Curry	Rutaceae	Leaves	Aqueous extract	STZ induced diabetes	Prasad et al.,2009 ¹² .
9	<i>Psidium guajava</i>	guava	Myrtaceae				
10	<i>Catharanthus roseus</i>	Cape periwinkle	Apocynaceae				
11	<i>ferula assafoetida</i>	Asafetida	Apiaceae	resins	Aqueous extract	pancreatic β -cells damage by alloxan-induced diabetes	Abu et al.,2010 ¹³ .
12	<i>Vinca rosea</i>	Bright eyes	Apocynaceae	whole plant	Methanolic extract	alloxan induced diabetes in rats	Ahmed et al., 2010 ¹⁴ .
13	<i>Terminalia chebula Retz</i>	Black myrobalan	Combretaceae	fruits	Ethanol extract	alloxan-monohydrate induced diabetes	Kannan et al.,2012 ¹⁵ .
14	<i>Marrubium vulgare</i>	white horehound	Lamiaceae	aerial part	aqueous extract	alloxan-monohydrate induced diabetes	Boudjela et al.,2012 ¹⁶ .
15	<i>Morus alba L.</i>	white mulberry	Moraceae	Leaves	70% ethanol extract	STZ induced diabetes	Hunyadi et al.,2012

							17.
1 6	<i>Paspalum scrobiculatum</i> Linn.	<i>Kodo millet</i>	Poaceae	grains	aqueous and ethanolic extracts	alloxan induced diabetic rats.	Jain et al., 2010 ¹⁸ .
1 7	<i>Suillellus luridus</i>	lurid bolete	Boletaceae	Fungus	hot water and ethanolic extract	Diabetes induced by injecting streptozotocin	Zhang et al., 2018 ¹⁹ .
1 8	<i>Cassia occidentalis</i>	coffee senna	Fabaceae	whole plant	petroleum ether, chloroform and aqueous extract	alloxan-induced diabetic rats	Verma et al., 2010 ²⁰ .
1 9	<i>Barleria prionitis</i> Linn	porcupine flower	Acanthaceae	Leaves, roots	Alcoholic extract	normal and alloxan-induced diabetic rats	Dheer et al., 2010 ²¹ .
2 0	<i>Psidium guajava</i>	guava	Myrtaceae	leaves,	methanolic extract	by the inhibition of alpha-glucosidase and alpha-amylase enzyme	Manikan dan et al., 2013 ²² .
2 1	<i>Vaccinium bracteatum</i> Thunb.	Sea Bilberry	Ericaceae	leaves		streptozotocin-induced diabetic mice	Wang et al., 2013 ²³ .
2 2 2	<i>Ocimum basilicum</i>	Basil	Lamiaceae	aerial parts	dichloromethane, methanol, and hexane extracts	Evaluation of role of glucose transporter-4 (GLUT4)	Kadan et al., 2016 ²⁴ .
2 3	<i>Gynostemma pentaphyllum</i>	jiaogulan	Cucurbitaceae	Herb		inhibit the glucose absorption	Wang et al., 2019 ²⁵ .
2 4	<i>Glycosmis pentaphylla</i>	Orangeberry	Rutaceae	stem bark	ethanol extracts, polyherbal formulation	streptozotocin+ nicotinamide induced diabetes mellitus in rats.	Petchi et al., 2014 ²⁶ .
2 5	<i>Tridax procumbens</i> ,	coatbutton	Compositae	whole plant			
2 6	<i>Mangifera indica</i>	Mango	Anacardiaceae	Leaves			
2 7	<i>Ficus amplissima</i>	kal-itchchi	Moraceae	Bark	methanolic extract	streptozotocin-induced diabetic rats	Arunachalam et al., 2013 ²⁷ .
2 8	<i>Vernonia cinerea</i>	Iron weeds	Compositae	Leaves	Ethanol extracts	alpha-amylase and alpha-glycosidase assays	Alara et al., 2018 ²⁸ .
2 9	<i>mulberry</i>	morus	Moraceae	Leaves		streptozotocin (STZ)-induced diabetic rats	Zhang et al., 2014 ²⁹ .
3 0	<i>Aegle marmelos</i>	Bael	Rutaceae	Leaves, callus	Methanol extracts	streptozotocin (STZ)-induced diabetic rabbits	Arumugam et al., 2015 ³⁰ .
3 1	<i>Croton macrostachyus</i>	Broad-leaved Croton	Euphorbiaceae	leaves	Aqueous extract	Alloxan Induced Diabetic Mice	Akira et al., 2015 ³¹ .
3 2	<i>Anacardium occidentale L.</i>	Cashew nut	Anacardiaceae	Leaves	Ethanol extract	n-streptozotocin diabetic rats	Jaiswal et al., 2017 ³² .

33	<i>Ajuga remota Benth</i>	Auja	Lamiaceae	Leaves	aqueous and 70% ethanol extracts	alloxan-induced diabetic mice	Tafesse et al., 2017 ³³ .
34	<i>Nerium oleander L.</i>	Nerium	Apocynaceae	Leaves	hydromethanolic extract	alloxan induced diabetes in mice	Dey et al., 2015 ³⁴ .
35	<i>Syzygium calophyllifolium</i>	Pretty-Leaved Plum	Myrtaceae	Bark	Methanol extract	Streptozotocin-Nicotinamide (STZ-NA) induced diabetic rats	Chandra n et al.,2016 ³⁵ .
36	<i>Nigella sativa</i>	Balck cumin	Ranunculaceae	Seeds	Methanol extract	<i>Streptozotocin</i> induced diabetic male rats	El Rabey et al., 2017 ³⁶ .
37	<i>Momordica charantia</i>	Bitter melon	Cucurbitaceae			Streptozotocin induced diabetes	Shanker et al., 2017 ³⁷ .
38	<i>Emblica officinalis</i>	Indian gooseberry	Phyllanthaceae		Ethanol extract		Fatima et al., 2017 ³⁸ .
39	<i>Momordica charantia L.</i>	Bitter melon	Cucurbitaceae	Fruit	Aqueous extract	alloxan-induced diabetic mice	Xu et al., 2015 ³⁹ .
40	<i>Myrtus Communis</i>	myrtle	Myrtaceae	Leaves	Hydroalcoholic extract	Streptozotocin induced diabetic rats	Panjesh ahin et al., 2016 ⁴⁰ .
Sl. No	Botanical name	Local name	Family	Parts used	Nanoparticles	Mechanism	reference
1	<i>Hibiscus subdariffa</i>	Roselle	Malvaceae	leaves	Zinc oxide nano particles	streptozotocin (STZ) induced diabetic mice	Bala et al.,2015 ⁴¹ .
2	-	-	-	-	zinc oxide and silver nanoparticles	streptozotocin (STZ) induced	Alkaladi et al.,2014 ⁴² .
3					Zinc oxide nanoparticles	streptozotocin-induced Type 1 and 2 diabetic rats	Umrani et al.,2014 ⁴³ .
4	<i>Glycyrrhiza glabra</i>	liquorice	Fabaceae	Roots,rhizomes	glycyrrhizin loaded nanoparticles	nicotinamide-streptozotocin induced diabetic rats	Rani et al., 2017 ⁴⁴ .

Conclusion

This article concludes the details about various plants and their parts used to treat anti-diabetic activity. This article consist of list of the plants recorded for the treatment of diabetes and their parts used. The Detailed Results would definitely draw the number of researchers to conduct additional studies that may lead to diabetes treatment medications. This can be accomplished by studies on pure plant derived chemical constituents in invivo clinical

trials. however for the improved status of medicinal plants, much needs to be achieved in further research.
