The image displays lead in its natural and refined states. At the top, a large, dark grey, crystalline mass of lead ore is shown, composed of numerous small, rounded, interlocking crystals. Below this, a smaller, similar cluster of lead ore is visible on the left. In the center, a large, rectangular, metallic block of refined lead is shown, exhibiting a bright, silvery-grey luster. To the right, a small portion of another lead ore cluster is visible. The background is a plain, light-colored surface.
