PREFACE

Booklet on Women and Men in Indonesia 2015 was published to present data on women and men and their linkage to the population composition, health, household's socio-economic status, education, labor force, participation in political and governmental affairs.

This source of data used are derived mostly from the results of National Socio Economic Survey (Susenas: Survei Sosial Ekonomi Nasional), National Labor Force Survey (Sakernas: Survei Angkatan Kerja Nasional), Demography and Health Survey, Micro and Small Industrial Survey, Village Potential Census, Indonesian Population Projection and administrative registration data from related government agencies and institutions. The information is presented in the form of figures and brief description for easy reading and understanding by general public.

High appreciation and profound gratitude are duly extended to all parties who have made this booklet a reality. Any constructive criticism and suggestion are expected for improvement of the publication in the future.

I. INTRODUCTION

One of the eight goals of Millennium Development Goals (MDGs) declared by the United Nations (UN) in the year of 2000 is to promote gender equality and empowerment of women. Where the targets of this goal are to eliminate gender disparities in primary and secondary education levels in 2005 and at all levels of education not more than 2015. This is in accordance with Indonesia's human development objectives of achieving gender equality in order to improve the quality of human resources without distinguishing male and female.

In order to reduce the gender gap, the government through policy and program development has been trying to integrate the experiences, aspirations, needs and problems of women and men into planning, implementation, monitoring and evaluation of national development programs. Strategies and policies to reduce the gender gap are called gender mainstreaming, in which to plan its implementation required an analysis of gender. Therefore, we need data, facts, and information about gender, i.e. the data disaggregated between women and men who can describe the gender gap.

This publication presents a picture of the field of gender-disaggregated data on population, health, household's socio-economic status, education, employment, political leadership and government. This publication is specifically aimed to show the gender-related data in fields directly related to efforts to improve the quality of Indonesian human.

The data presented are summarized from various sources including the National Socio-Economic Survey, the National Labor Force Survey, Demography and Health Survey, Micro and Small Industrial Survey, Indonesian Population Projection, as well as other data sources containing results of administrative records from various relevant agencies. Presentation of information in this publication is in the form of figures and tables as well as reviews that are easy to understand the various parties, both the general public, as well as policy makers and is expected to be used as one reference in assessing gender issues in Indonesia.

II. Population

A. Population

- According to the 2010 Population Census, the population of Indonesia in 2010 (May) reach some 237.64 million people, consists of 118.01 million female and 119.63 million male.
- According to the 2010 Population Census projections, number population of Indonesia in 2014 become 252.04 million people, consists of 125.38 million female and 126.65 million male.
- Indonesia is the fourth most populous country after China (1,392.5 million), India (1,272.9 million) and United States of America (323.3 million).

Figure 2.1

Indonesia Population Compared with Other Countries, 2014

Source: Statistical Yearbook of Indonesia 2015

B. Population Structure

Distribution of the population by age group and sex can be described in terms of the population pyramid (Figure 2.2).

- The age structure of Indonesia's population is dominated by young population. This cases indicated by the bottom of pyramid is relatively wide.
- The largest frequency for both female and male population are at the age group 10-14 years.

Figure 2.2
Population Pyramid of Indonesia, 2014

Source: National Socio Economic Survey, 2014

Population age structure can also be divided into productive age (15-64 years), has not been productive (0-14 years) and no longer productive (65 years and over).

- Female of productive age relatively similar with male. Female of no longer productive age more than male. While the group has not been productive, less female than male.
- Out of 100 female, 28 of them has not been productive, 66 people at productive age and 6 people is no longer productive.
- Out of 100 male, 29 of them has not been productive, 66 people at productive people aged and 5 people is no longer productive.

Figure 2.3
Percentage of Population by Productive Age Group and Sex,
2014

Source: National Socio Economic Survey, 2014

C. Population Composition

1. Sex Ratio

- In 2014, the sex ratio was 101.01, which means that there were 101 males to 100 females.
- In 2012 to 2014, sex ratio was more than 100. This shows that males is more than females population.

Source: National Socio Economic Survey, 2012-2014

2. Dependency Ratio

- In 2012, the dependency ratio is 50.86. In 2013 the dependency ratio is 50.89 and in 2014, the dependency ratio is 50.88.
- This is every 100 productive aged people (aged 15-64 years) support 51 non productive aged people (0-14 years and 65 years and over).
- The greater the dependency ratio, the more the burden to be borne by the population of productive age.

Figure 2.5
Dependency Ratio, 2012-2014

Source: National Socio Economic Survey, 2012-2014

3. Number of Under Five-Year of Age Children

Percentage of under five-year of age children to the total population amounted 9.12 percent, which consists of 4.48 percent female and 4.64 percent male.

- Percentage of under five year of age children to the total population was relatively similar between female and male, both in urban and rural areas.
- Out of 100 female population, 9 children under five.
- Out of 100 male population, 9 children under five.

Figure 2.6
Percentage of Under Five-Year of Age Children to Total Population by Sex, 2014

Source: National Socio Economic Survey, 2014

4. Percentage of School-Age Population

The school age population (7-18 year) female (21.86 percent) is slightly lower than male (22.82 percent).

- In each the school age population (7-12, 13-15, and 16-18 year) female population is slightly lower than male population.
- Out of 100 females, 12 people aged 7-12 year, 5 people aged 13-15 year, 5 people aged 16-18 year, and 78 people are out of that age group.
- Out of 100 males, 12 people aged 7-12 year, 6 people aged 13-15 year, 5 people aged 16-18 year, and 77 people are out of that age group.

Figure 2.7
Percentage of Population Aged 7-12, 13-15 and 16-18 Years to Total Population by Sex, 2014

Source: National Socio Economic Survey, 2014

D. Total Fertility Rate

- According to Demography and Health Survey (DHS) 2012, Total Fertility Rate (TFR) in 2012 was 2.60.
- According to Indonesian Population Projection 2010-2035, TFR in 2013 was 2.32 and in 2014 was 2.30.
- The average number of children born to a female to complete their reproductive period (age 15-49 years) in 2014 was 2.3 children.

Figure 2.8
Total Fertility Rate, 2012-2014

Source: DHS 2012 and Indonesian Population Projection 2010-2035

III. Health

A. Health Complaints

Females who had health complaints during the last month (29.90 percent) slightly exceeded than that of males (28.55 percent).

- 30 out of the 100 females had health complaint during the last month.
- 29 out of the 100 males had health complaint during the last month.
- Females who had health complaint living in rural areas (30.57 percent) more than in urban areas (29.23 percent).
- Males who had health complaint living in rural areas (29.19 percent) more than in urban areas (27.91 percent).

Figure 3.1

Percentage of Population who had Health Complaints during the Last Month by Sex and Urban Rural Classification, 2014

Source: National Socio Economic Survey, 2014

B. Self Treatment

The number of females who had health complaints and having self treatment or not visiting health facilities during the last month (59.87 percent) was lower than males (62.26 percent).

- 60 out of the 100 females who had health complaint during the last month having self treatment.
- 62 out of the 100 males who had health complaint during the last month having self treatment.
- Females and males who had health complaint during the last month and having self treatment in urban areas (59.74 percent and 62.20 percent) relatively similar with rural areas (60.00 percent and 62.32 percent).

Figure 3.2
Percentage of Population who Had Health Complaints and Performed Self Treatment during the Last Month by Sex and Urban Rural Classification, 2014

Source: National Socio Economic Survey, 2014

C. Outpatient

The number of females who had health complaint and had outpatient treatment or visiting health facilities during the last month (50.53 percent) is more than males (48.01 percent).

- 51 out of the 100 females who had health complaint took outpatient treatment to cure their diseases.
- 48 out of the 100 males who had health complaint took outpatient treatment to cure their diseases.
- Females and males who had health complaint and had outpatient treatment in urban areas (51.93 percent and 48.77 percent) higher than in rural areas (49.19 percent and 47.27 percent).

Figure 3.3
Percentage of Population who Had Health Complaints and Performed Outpatient Treatment during the Last Month by Sex and Urban Rural Classification, 2014

Source: National Socio Economic Survey, 2014

D. Family Planning

Participation in contraceptive use still dominated by females (tubectomy, IUD, injection, implant, pill, intravag, and female condom) than males (vasectomy and condom). This is line with the availability of the contaceptive methods that generally suitable for female.

- 97 out of the 100 females aged 15-49 years who currently used contraceptive¹, use the type of contraceptive of females.
- Contraceptive used for females in urban areas (95.70 percent) lower than in rural areas (97.97 percent).
- Males participation in family planning in urban areas (2.07 percent) was slightly higher than in rural areas (0.84 percent).

E. HIV-AIDS

- Cumulative number HIV and AIDS cases from 1 April 1987 to 31 Desember 2014 are 160,138 HIV cases and 65,790 AIDS cases.
- Prevalence of AIDS cases up to 31 Desember 2014 was 26.10 per 100,000 populations.

Tabel 3.1
Cumulative HIV and AIDS Cases

F. The Last Birth Attendant

The majority of last births are attended by midwives and other paramedic (66.14 percent).

- Out of the 100 births, 21 of which were attended by doctor, 66 by midwives and other paramedic, 13 by non paramedic (traditional birth attendance, family and others).
- The births attended by doctor in urban areas (29.49 percent) higher than in rural areas (12.65 percent).
- The births attended by midwives and other paramedic in rural areas (67.97 percent) higher than in urban areas (64.26 percent).
- The births attended by non paramedic in urban areas (6.25 percent) lower than in rural areas (19.38 percent).

Figure 3.6

Percentage of Under Five Years Old Infants by Last Birth Attendants and Urban Rural Classification, 2014

Source: National Socio Economic Survey, 2014

G. Ever Breast-Fed Infants

There is no difference occurred between female and male infants who had breastfed.

- Out of the 100 female infants, 94 of them had breastfed.
- Out of the 100 male infants, 94 of them had breastfed.
- Female and male infants in urban areas who had breastfed (93.12 percent and 92.73 percent) less than in rural areas (95.65 percent and 95.23 percent).

Figure 3.7
Percentage of Ever Breast-fed Under-Five Years Old Infants
by Sex and Urban Rural Classification, 2014

Source: National Socio Economic Survey 2014

H. Children Aged 2-4 Year Experienced Breast-fed for 18-23 Months

There is no difference in breastfeeding during the 18-23 months between female infants and male infants aged 2-4 years.

- Out of the 100 female infants aged 2-4 years, 20 of them were breast-fed for a period of 18-23 months.
- Out of the 100 male infants aged 2-4 years, 20 of them were breast-fed for a period of 18-23 months.
- Breast-feeding for 18-23 months to children aged 2-4 years of female and male in urban areas (18.38 percent and 17.44 percent) less than in rural areas (21.91 percent and 21.54 percent).

Figure 3.8
Percentage of Children Aged 2-4 Years Experienced Breast-fed for 18-23 Months by Sex and Urban Rural Classification, 2014

Source: National Socio Economic Survey 2014

I. Children Aged 2-4 Years who were Only Breast-fed for a Period of 6 Months or More

Percentage of female infants aged 2-4 years who were only breast-fed for a period of six months or more, higher than male infants.

- 46 out of 100 female infants aged 2-4 years who were breast-fed for a period of six months or more.
- 45 out of 100 male infants aged 2-4 years who were breast-fed for a period of six months or more.
- Percentage of children aged 2-4 years who were only breast-fed for a period of six months or more for female and male in urban areas (46.54 percent and 45.40 percent) was higher than in rural areas (45.72 percent and 44.64 percent).

Figure 3.9
Percentage of Children Aged 2-4 Years who were Only Breast-fed for a Period of Six Months or more by Sex and Urban Rural Classification, 2014

Source: National Socio Economic Survey 2014

IV. Education

A. Population Aged 5 Years and Over who Does not/ Never Attended School

Female population aged 5 years and over who does not/ never attended school is more than that of male population.

- Out of 100 female population aged 5 years and over, 9 of them do not/never attend school.
- Out of 100 male population aged 5 years and over, 6 of them do not/never attend school.
- According to urban and rural areas, there are differences between female and male who do not/ never attend school, where female is more than male.

Figure 4.1
Percentage of Population Aged 5 Years and Over
who Does Not/Never Attend School by Sex and
Urban Rural Classification, 2014

Source: *National Socio Economic Survey, 2014*

B. Population Aged 5 Years and Over who is Still Attending School

Nationally, female population aged 5 years and over who is still attending school is relatively equal to male population. The same pattern occurs in both urban and rural areas.

- Out of 100 female population aged 5 years and over, 26 of them are still attending school.
- Out of 100 male population aged 5 years and over, 27 of them are still attending school.

Figure 4.2
Percentage of Population Aged 5 Years and Over who is Still Attending School by Sex and Urban Rural Classification, 2014

Source: *National Socio Economic Survey, 2014*

C. School Enrollment Rate (SER)

Formal and Non Formal

1. SER of Population Aged 7-12 Years

SER of population aged 7-12 years for female are relatively equal to male, both in urban and in rural areas.

- Out of 100 female population aged 7-12 years, 99 of them are still in school.
- Out of 100 male population aged 7-12 years, 99 of them are still in school.

Figure 4.3
School Enrollment Rate of Population Aged 7-12 Years
by Sex and Urban Rural Classification, 2014

Source: *National Socio Economic Survey, 2014*

2. SER of Population Aged 13-15 Years

Nationally, SER of female population 13-15 years of age is higher than that of male population in the same age group.

- Out of 100 female population aged 13-15 years, 95 of them are still in school.
- Out of 100 male population aged 13-15 years, 94 of them are still in school.
- According to urban rural classification, SER of female population aged 13-15 years either in urban or in rural area is higher than that of male population.

Figure 4.4
School Enrollment Rate of Population Aged 13-15 Years
by Sex and Urban Rural Classification, 2014

Source: National Socio Economic Survey, 2014

3. SER of Population Aged 16-18 Years

Nationally, SER of male population aged 16-18 years is relatively similar to SER of female population in the same age group.

- Out of 100 female population aged 16-18 years, 71 of them are still in school.
- Out of 100 male population aged 16-18 years, 70 of them are still in school.
- According to urban rural classification, SER of population aged 16-18 years both female and male in urban is higher than that of in rural areas.

Figure 4.5
School Enrollment Rate of Population Aged 16-18 Years
by Sex and Urban Rural Classification, 2014

Source: *National Socio Economic Survey, 2014*

D. Net Enrollment Rate (NER)

Formal and Non Formal

1. NER of Elementary School (SD)/Madrasah Ibtidaiyah (MI)/Package A

NER of female population aged 7-12 years who is attending elementary school/MI/package A is relatively equal to male population.

- Out of 100 female population aged 7-12 years, 96 of them are still attending elementary school/MI/Package A.
- Out of 100 male population aged 7-12 years, 97 of them are still attending elementary school/MI/Package A.
- In urban area, NER of male population who is attending elementary school/ MI/Package A is slightly higher than that of female. While in rural area, there is no significant difference between NER of elementary school/MI/Package A, both female and male population.

Figure 4.6

Net Enrollment Rate of Elementary School (SD)/
Madrasah Ibtidaiyah (MI)/Package A by Sex and
Urban Rural Classification, 2014

Source: *National Socio Economic Survey, 2014*

2. Net Enrollment Rate (NER) of Junior High School/Madrasah Tsanawiah (MTs)/Package B

When it is compared to the NER of elementary school/MI/Package A, it is shown that the NER of population aged 13-15 years who attended junior high school/MTs/Package B is lower, both for female and male population.

Nationally, NER of junior high school/MTs/Package B in female population is higher than that of male population.

- Out of 100 female population aged 13-15 years, 79 of them are still attending junior high school/MTs/Package B.
- Out of 100 male population 13-15 years of age, 76 of them are still attending junior high school/MTs/Package B.
- NER of female in junior high school/MTs/Package B both in urban and rural area are higher than that of male.

Figure 4.7

Net Enrollment Rate (NER) of Junior High School Madrasah Tsanawiah (MTs)/Package B by Sex and Urban Rural Classification, 2014

Source: National Socio Economic Survey, 2014

3. Net Enrollment Rate (NER) of Senior High School/Vocational School/Madrasah Aliyah (MA)/Package C

When it is compared with the NER of elementary school/MI/Package A and NER of junior high school/MTs/Package B, it is shown that the NER of population aged 16-18 years who attend senior high school/vocational school/MA/Package C is lower than that, applies both for female and male population.

- Out of 100 female population aged 16-18 years, 60 of them are still in senior high school/vocational school/MA/Package C.
- Out of 100 male population aged 16-18 years, 59 of them are still in senior high school/vocational school/MA/Package C.
- According to urban rural classification, it is shown that differences between NER of senior high school/vocational school/MA/Package C in urban and rural area.
- NER of senior high school/vocational school/MA/Package C in urban area, female are relatively similar with male, whereas NER of senior high school/vocational school/MA/Package C in rural area, female is slightly higher than male.

Figure 4.8
**Net Enrollment Rate (NER) of Senior High School/
Vocational School/Madrasah Aliyah (MA)/Package C
by Sex and Urban Rural Classification, 2014**

Source: *National Socio Economic Survey, 2014*

E. Population Aged 15 Years and Over who Do Not Obtain a Diploma

Female population 15 years of age and over who do not obtain a diploma is much higher than that of male population, applies both in urban and rural area.

- Out of 100 female population aged 15 years and over, 22 of them do not obtain a diploma.
- Out of 100 male population aged 15 years and over, 16 of them do not obtain a diploma.
- According to urban rural classification, female and male population aged 15 years and over area who do not obtain a diploma in urban area (15.17 percent and 9.88 percent) is lower than that in rural area (29.86 percent and 22.10 percent).

Figure 4.9
Percentage of Population Aged 15 Years and Over who Do Not Obtain a Diploma by Sex and Urban Rural Classification, 2014

Source: *National Socio Economic Survey, 2014*

F. Population Aged 15 Years and Over who Attained Primary Education

Nationally, female population aged 15 years and over who have successfully completed primary education (at least graduated junior high school/MTs) is lower than male population.

- Out of 100 female population aged 15 years and over, 48 of them have successfully completed primary education.
- Out of 100 male population aged 15 years and over, 49 of them have successfully completed primary education.
- Achievement of primary education of both female and male in urban areas (43.04 percent and 41.30 percent) was lower than in rural areas (52.82 percent and 56.24 percent) and 47.84 percent and 48.62 percent).

Figure 4.10
Percentage of Population Aged 15 Years and Over who Attained Primary Education by Sex and Urban Rural Classification, 2014

Source: National Socio Economic Survey, 2014

G. Illiteracy/Literacy Rate

Nationally, female population aged 15 years and over who are illiterate is higher than that of male population.

- Out of 100 female population aged 15 years and over, 7 of them are illiterate.
- Out of 100 male population aged 15 years and over, 3 of them are illiterate.
- Both female and male population aged 15 years and over who are illiterate in rural area (9.44 percent and 4.79 percent) is higher than that of urban area (3.77 percent and 1.69 percent) (3.77 percent and 1.69 percent).

Source: *National Socio Economic Survey, 2014*

H. Principal and Teacher

The number of male principal in elementary school through senior high school is higher than that of female principal.

- Out of 100 elementary school principals, 39 of whom are female and 61 are male.
- Out of 100 junior high school principals, 20 of whom are female and 80 are male.
- Out of 100 senior high school principals, 12 of whom are female and 88 are male.

Figure 4.12
Percentage of Principals by Sex and School Levels, 2013/2014

Source: Ministry of Education and Culture

Female teacher in elementary and junior high school is much higher than that of male teacher whereas at senior high school and vocational school the number of male teacher is much higher than that of female teacher.

- Out of 100 elementary school teachers, 64 of whom are female and 36 are male.
- Out of 100 junior high school teachers, 56 of whom are female and 44 are male.
- Out of 100 high school teachers, 53 of whom are female and 47 are male.

Figure 4.13
Percentage of Teachers by Sex and School Levels, 2013/2014

Source: Ministry of Education and Culture

V. Labor Force

A. Workforce Enrollment Rate and Open Unemployment Rate

- Workforce enrollment rate of female (50.22 percent) is lower than workforce enrollment rate of male (83.05 percent).
- Open unemployment rate of female (6.26 percent) is higher than open unemployment rate of male (5.75 percent).

Figure 5.1
Workforce Enrollment Rate and Open Unemployment Rate
of Population Aged 15 Years and Over by Sex, 2014

Source: National Labor Force Survey, August 2014

B. Main Industry

Role of female in trade sector is higher than male, whereas role of female in construction sector are much lower than male.

- Out of 100 population aged 15 years and over in trade sector, 52 were female and 48 were male.
- Out of 100 population aged 15 years and over in construction sector, 3 were female and 97 were male.

Figure 5.2

Percentage of Population 15 Years of Age and Over Who Work by Sex and Main Industry, 2014

Source: National Labor Force Survey, August 2014

Description:

- 1 = Agriculture, forestry, hunting, and fishery
- 2 = Mining and quarrying
- 3 = Manufacturing industry
- 4 = Electricity, gas and water
- 5 = Construction
- 6 = Wholesale trade, retail trade, restaurant and hotels,
- 7 = Transportation, storage, and communication
- 8 = Financing, insurance, real estate, and business services
- 9 = Community, social, and personal services

C. Employment Status

Employment status as employer (own account workers and employer assisted by worker), employee and family worker/unpaid worker is dominated by male.

- Out of 100 population aged 15 years and over who worked with own account workers status, 37 were female and 63 male person.
- Out of 100 population aged 15 years and over who worked with employer assisted by worker status, 24 were female and 76 male person.
- Out of 100 population aged 15 years and over who worked with employee status, 35 were female and 65 male person.
- Out of 100 population aged 15 years and over who worked with casual employee/family worker status, 54 were female and 46 male person.

Source: National Labor Force Survey, August 2014

Description:

1 = Own account workers

3 = Employee

2 = Employer assisted by worker

4 = Casual employee/family worker

D. Occupation

Type of occupation as administrative and managerial worker and others worker is dominated by male than female, while sales worker and professional, technician and related worker is dominated by female than male.

- Out of 100 population aged 15 years and over who worked as others worker, 5 were female and 95 were male.
- Out of 100 population aged 15 years and over who worked as administrative and managerial worker, 19 were female and 81 were male.
- Out of 100 population aged 15 years and over who worked as sales worker, 53 were female and 47 were male.
- Out of 100 population aged 15 years and over who worked as professional, technician and related worker, 52 were female and 48 were male.
