KATA PENGANTAR

Survei penduduk Antar Sensus (SUPAS) merupakan survei kependudukan yang dilaksanakan diantara dua sensus. Sebelum SUPAS2015, kegiatan survei ini telah empat kali dilaksanakan, yaitu pada tahun 1976, 1985, 1995, dan 2005. Tujuan dilaksanakannya SUPAS2015 diantaranya adalah untuk dapat memperkirakan jumlah, distribusi dan komposisi penduduk, untuk menyediakan data karakteristik kependudukan dan untuk penghitungan parameter demografi, sebagai koreksi terhadap hasil proyeksi penduduk 2010-2035, dan sebagai bahan perencanaan serta evaluasi terakhir MDGs.

Adapun data dan informasi yang disampaikan mencakup keterangan pokok penduduk, kelahiran, kematian, mobilitas penduduk, dan perumahan, juga informasi terkait isu-isu terkini seperti disabilitas, migrasi internasional, dan perubahan iklim. Informasi yang disampaikan mencakup keseluruhan tabulasi karakteristik penduduk pada tingkat nasional. Angka yang disajikan dalam buku ini merupakan angka sementara dan dapat menjadi rujukan bagi penyajian karakteristik lainnya yang akan dilakukan secara bertahap.

Akhirnya disampaikan terima kasih kepada seluruh rakyat Indonesia atas partisipasinya dalam kegiatan SUPAS2015. Penghargaan juga disampaikan kepada semua pihak yang berpartisipasi dalam penyusunan publikasi ini.

PENJELASAN

I. PENDAHULUAN

1.1 Latar Belakang

Survei Penduduk Antar Sensus (SUPAS) bertujuan untuk mengestimasi jumlah penduduk dan indikator demografi diantara dua waktu sensus penduduk. Badan Pusat Statistik (BPS) telah empat kali melakukan SUPAS, yaitu tahun 1976, 1985, 1995, dan 2005. SUPAS2015 merupakan SUPAS yang kelima yang dilaksanakan BPS. SUPAS2015 mengumpulkan data kependudukan yang mencakup: keterangan pokok penduduk, lansia, kelahiran, kematian, kematian ibu, perpindahan penduduk, ketenagakerjaan, fasilitas perumahan, dan ditambahkan informasi mengenai: migrasi keluar internasional, perubahan iklim, dan disabilitas.

Kegiatan SUPAS2015 telah dimulai sejak tahun 2013 yaitu dengan rangkaian persiapan penyusunan kuesioner dan buku petunjuk teknis. Kuesioner dan buku petunjuk teknis tersebut telah disusun melalui berbagai diskusi dan *workshop*, dengan mempertimbangkan masukan dari para pengguna data dan pakar kependudukan. Pada tahun 2014 telah dilakukan uji coba SUPAS2015 di tiga provinsi, yaitu: Provinsi Sumatera Barat (Kota Padang); Provinsi DI Yogyakarta (Kabupaten Bantul); dan Provinsi Sulawesi Utara (Kota Manado). Uji coba SUPAS2015 menerapkan seluruh tahapan kegiatan yang akan

dilaksanakan pada SUPAS2015. Kegiatan tersebut dilaksanakan untuk menguji rancangan prosedur, tata kerja dan manajemen lapangan, rekrutmen petugas, kuesioner, menyempurnakan rancangan buku petunjuk teknis, program pengolahan data dan berbagai aspek administratif.

Hasil kegiatan uji coba SUPAS2015 dievaluasi dan menjadi bahan yang dibawa pada rangkaian diskusi, workshop, dan seminar yang dihadiri oleh para pengguna data serta pakar kependudukan. Kegiatan tersebut dimaksudkan untuk menyempurnakan metodologi, kuesioner, buku petunjuk teknis, pengolahan, serta diseminasi hasil SUPAS2015. Kegiatan lapangan SUPAS2015 dilakukan selama periode tanggal 1-31 Mei tahun 2015 yaitu dengan diawali oleh pemutakhiran rumah tangga dan pemilihan sampel diikuti dengan pencacahan ke rumah tangga terpilih, untuk seluruh wilayah sampel yang tersebar di Indonesia.

1.2 Tujuan SUPAS2015

SUPAS2015 bertujuan untuk:

1. Memperkirakan jumlah, distribusi dan komposisi penduduk.
2. Menyediakan data untuk penghitungan parameter fertilitas, meliputi angka kelahiran total (TFR), angka kelahiran kasar

(CBR), rasio ibu-anak (CWR), angka kelahiran menurut kelompok umur (ASFR), dll.

3. Menyediakan data untuk penghitungan parameter migrasi, meliputi migrasi semasa hidup, migrasi risen, migrasi internasional, migrasi sirkuler, dll.
4. Menyediakan data untuk penghitungan parameter mortalitas, meliputi angka kematian kasar (CDR), angka kematian bayi (IMR), angka kematian balita (CMR), dan angka kematian ibu (MMRatio).
5. Memperbaharui proyeksi penduduk yang telah disusun sebelumnya.
6. Menyediakan data yang dapat digunakan untuk perencanaan dan evaluasi berbagai program pemerintah.
7. Menyediakan data karakteristik penduduk.

1.3 Cakupan Wilayah

SUPAS2015 dilaksanakan di seluruh Indonesia. Jumlah sampel yang dicakup adalah 40.750 blok sensus dengan jumlah rumah tangga sebanyak 652.000.

1.4 Cara Pencacahan

Pencacahan penduduk pada kegiatan SUPAS2015 dilakukan dengan cara **de jure** dan **de facto**. Konsep **de jure** digunakan untuk mencatat seseorang biasanya

menetap/bertempat tinggal (*usual residence*). Penduduk yang bertempat tinggal tetap dicacah di mana mereka biasanya bertempat tinggal. Penduduk yang sedang bepergian 6 bulan atau lebih, atau yang telah berada pada suatu tempat tinggal selama 6 bulan atau lebih, dicacah dimana mereka tinggal pada saat pencacahan. Penduduk yang menempati rumah kontrak/sewa (tahunan/bulanan) dianggap sebagai penduduk yang bertempat tinggal tetap. Konsep **de facto** digunakan untuk mencatat penduduk dimana ditemui saat pencacahan (tadi malam menginap).

1.5 Jadwal Pelaksanaan Kegiatan

II. METODOLOGI

2.1 Penghitungan Jumlah Sampel

Variabel yang dijadikan dasar penghitungan adalah perkiraan kejadian kematian pada wanita yang sedang hamil, saat melahirkan, dan saat nifas dari data Sensus Penduduk 2010 dengan harapan memberikan gambaran yang lebih akurat pada level region dan nasional.

2.2 Kerangka Sampel:

Kerangka sampel yang digunakan terdiri dari:

1. Kerangka sampel blok sensus: blok sensus pada setiap kabupaten yang terlebih dahulu dilakukan proses

stratifikasi berdasarkan indeks kesejahteraan rumah tangga, sehingga kerangka sampel blok sensus adalah daftar blok sensus yang dilengkapi dengan strata dimaksud dan jumlah rumah tangga hasil SP2010.

2. Kerangka sampel rumah tangga: daftar seluruh rumah tangga hasil pemutakhiran pada blok sensus terpilih. Proses pemutakhiran rumah tangga atau *updating* dilakukan untuk mendapatkan gambaran keadaan rumah tangga yang sebenarnya di blok sensus terpilih. Pada saat pemutakhiran tersebut ditanyakan juga kejadian kematian yang terjadi di rumah tangga biasa. Hal ini untuk menjangkau rumah tangga yang *eligible* untuk modul kematian.

2.3 Stratifikasi Blok Sensus

Stratifikasi Blok Sensus didasarkan pada indeks kesejahteraan rumah tangga yang bersumber dari data SP2010-C1. Variabel yang digunakan untuk determinasi strata adalah Pendidikan KRT dan Variabel Perumahan. Indeks Kesejahteraan dihitung dengan *PCA Polychoric* dan dihitung untuk setiap rumah tangga. Stratifikasi dilakukan pada level blok sensus dengan menghitung indeks konsentrasi setiap blok sensus pada setiap kabupaten/kota. Indeks konsentrasi

dihitung sedemikian rupa dengan dasar indeks kesejahteraan yang dihitung untuk setiap rumah tangga.

Variabel yang dijadikan strata adalah 9 variabel (yang signifikan) yaitu : jenis lantai, sumber penerangan utama, bahan bakar utama memasak, sumber air minum utama, fasilitas tempat buang air besar, tempat akhir pembuangan tinja, menguasai telepon, ada tidaknya ART internet, pendidikan KRT.

Populasi rumah tangga hasil *listing* atau *updating* dikelompokkan dalam dua strata yaitu strata rumah tangga yg memiliki kasus kematian dan strata rumah tangga yang tidak memiliki kasus kematian. Untuk menjaga bahwa setiap strata harus ada sampel (*representative* populasi) maka sebaran sampel dibuat sebagai *take some* dan *take all* (Glaser 1962). Proses penentuan dapat dijelaskan sebagai berikut:

1. Populasi strata ada kasus kematian akan *take all* jika jumlah populasi rumah tangga 1-8, dan akan *take some* sejumlah 8 jika >8 rumah tangga, dapat disebut jumlah sampel adalah n_1 .
2. Populasi strata tidak ada kasus kematian akan selalu *take some* sejumlah $n_2 = n - n_1$, dimana n adalah 16 rumah tangga.

Proses pengambilan sampel akan disusun dalam paket program pengambilan sampel SUPAS 2015 yang nantinya petugas setelah melakukan *input* hasil pemutakhiran atau *updating*, maka SUPAS2015-DSRT otomatis akan terbentuk dan dapat dicetak untuk pendataan di lapangan.

III. MANAJEMEN LAPANGAN

Secara umum penanggung jawab pelaksanaan lapangan adalah Kepala BPS provinsi untuk tingkat provinsi. Untuk tingkat wilayah kabupaten/kota penanggung jawabnya adalah Kepala BPS kabupaten/kota. Pada masing-masing tingkatan tersebut kegiatan SUPAS2015 terkoordinasi berturut-turut pada Kepala Bidang Statistik Sosial BPS Provinsi dan Kepala Seksi Statistik Sosial BPS Kabupaten/Kota.

Unsur fungsional teknis dalam pelaksanaan lapangan SUPAS2015 terdiri dari petugas lapangan dan instruktur. Petugas lapangan terdiri dari pencacah dan kortim. Instruktur terdiri dari instruktur nasional (Innas), instruktur utama (Intama), dan master instruktur utama (master Intama).

Dalam pelaksanaan SUPAS2015 ini pencacahan dilakukan secara tim, terdiri dari 1 kortim dan 2 pencacah. Wilayah tugas untuk setiap tim adalah 10 (sepuluh) BS. Target waktu pemutakhiran sampai pencacahan untuk 10 BS tersebut adalah 1 (satu) bulan. Pencacahan rumah tangga

menggunakan Daftar SUPAS2015-S harus dilaksanakan segera setelah pemutakhiran selesai dalam 1 BS.

EXPLANATORY NOTES

I. INTRODUCTION

1.1 Background

The purpose of Inter-Censal Population Survey (SUPAS) is to estimate population size and demographic indicators between two censuses. BPS-Statistics Indonesia have been carried out SUPAS four times, in 1976, 1985, 1995, and 2005. SUPAS2015 is the fifth SUPAS implemented by BPS-Statistics Indonesia. SUPAS2015 collect demographic data such as: basic description of the population, the elderly, births, deaths, maternal deaths, population mobility, employment, housing, and also information related to international migration, climate change, and disability.

SUPAS2015 activities began in 2013, which started with the preparation of questionnaires and technical manuals. The questionnaire and the technical manual had been compiled through various discussions and workshops, and many inputs from data users and demographic experts. In 2014 The SUPAS2015 pilot survey was conducted in three provinces: West Sumatra (Padang); DI Yogyakarta (Bantul); and North Sulawesi (Manado). The SUPAS2015 pilot survey implemented all phases of The SUPAS2015. The pilot survey was carried out to test design procedures, working procedures and field

management, enumerators recruitment, questionnaires, refining the draft of technical manuals, data processing programs and various administrative aspects.

Results of SUPAS2015 pilot survey was evaluated and became input materials for a series of discussions, workshops, and seminars attended by data users and demographic experts. Those activities was carried out with the intention enhancing the methodology, questionnaires, technical manuals, data processing, and dissemination of the SUPAS2015. The SUPAS2015 field enumeration conducted during 1-31 May of 2015, started with updating of households and the sample selection followed by the enumeration of selected households, for the sample areas throughout Indonesia.

1.2 The Purposes of 2015 Inter-Censal Population Survey (SUPAS2015)

The purposes of SUPAS2015 are:

- 1. To estimate the size, distribution and composition of population.*
- 2. To provide data for the calculation of fertility parameters, including total fertility rate (TFR), crude birth rate (BSR), child-woman ratios (CWR), aged specific fertility rate (ASFR), etc.*

3. To provide data for the calculation migration parameters, including life time migration, recent migration, international migration, circular migration, etc.
4. To provide data for the calculation mortality parameters, such as crude mortality rate (CDR), infant mortality rate (IMR), child mortality rate (CMR), and maternal mortality ratio (MMRatio).
5. To update the population projections that was previously compiled.
6. To provide data that can be used for planning and evaluation of government programs.
7. To provide data characteristics of population.

1.3 Scope and Coverage

SUPAS2015 is implemented throughout Indonesia. Sample size covered are 40,750 census blocks with 652,000 number of households.

1.4 Enumeration

The enumeration of SUPAS2015 is carried out using the **de jure** and **de facto** approach. The concept of **de jure** is used to record the usual residences. Residents who live permanently enumerated at their usual residences. Residents

who are traveling for 6 months or more, or who has been in a residence for six months or more are enumerated where they lived at the time of enumeration. Residents who occupied a rented house (annual/monthly) are considered as residents who live permanently. The concept of **de facto** is used to record the population encountered during enumeration (overnight stay).

II. METHODOLOGY

2.1 Sample Size

Variables that are used as the basis for sample selection estimates of women who died during pregnancy, childbirth and after childbirth from the Population Census of 2010 with the expectation of providing a more accurate description at national and sub-national level.

2.2 Sample Frame

The sample frame consists of:

Sampling frame of census block: census blocks in each municipality are stratified based on the household welfare index, so the sample frame of census block stratified by welfare level and the number of households based on the result of SP2010.

Household sample frame: a list of all households based on the results of updating the selected census block. The process of

household updating is conducted to obtain a description of the actual situation of households in selected census blocks. During updating the households are also asked about deaths that occurred in the ordinary households. The purpose is to capture households eligible for the mortality modules.

2.3 Stratified Census Block

The census block stratification is based on household wealth index derived from the SP2010-C1 data. Variables used for the determination of the strata are education of household head and housing variables. Wealth Index is calculated by using PCA Polychoric and calculated for each household. Stratification is done at the census block level by calculating the concentration indices of each census block in each regency/municipality. The concentration index is calculated in such a way based on the wealth index which is calculated for each household.

Variables used as strata are nine statistically significant variables, such as: the type of floor, the main source of lighting, the main fuel for cooking, main drinking water, toilet facilities, type of fecal disposal, telephone ownership, access to internet, and head of household education.

Household population based on the updating results are grouped into two strata, households where deaths occurred and

strata of households that do not have any death case. To maintain that strata should have samples (representative population) the distribution of the sample was made using the take some and take all (Glaser 1962). Determination process can be explained as follows:

1. Population strata which have cases of 1 to 8 death will be automatically selected all, and households where death occurred will be selected 8 if the number of deaths is more than 8. That type of sample is called take some.
2. The population strata with no cases of death will always be selected the conventional way, $n_2 = n - n_1$, where n is 16 households.

The sampling process will be compiled in SUPAS2015 sampling program package, where enumerators will input the results of updating, then the SUPAS2015-DSRT will automatically be created and can be printed for data collection in the field.

III. FIELD MANAGEMENT

In general, the head of BPS-Statistics Indonesia provincial office is in charge of the enumeration. At regency/municipality level the responsible person is the head of the BPS-Statistics Indonesia district office. At each of these levels, SUPAS2015 activities is coordinated by the head of

Social Statistics division at provincial level and head of Social Statistics Section at regency/municipality level.

Technical functional elements in the SUPAS2015 field enumeration consists of field officers and instructors. Field officers consists of enumerators and team coordinator. Instructor consists of national instructors (Innas), the main instructor (Intama), and the master of the main instructor (master Intama).

In SUPAS2015 the enumeration is conducted by teams, consisting of 1 team coordinator and 2 enumerators. Each team is assigned 10 (ten) census blocks. The target for updating and enumerating for 10 census blocks is 1 (one) month. Enumeration of households using SUPAS2015-S questionnaire should be implemented as soon as the updating is completed in one census block.

IV. CONCEPT AND DEFINITION
